## Columbia Mulch

### Product Description

Columbia Mulch is wheat straw and pulped wheat straw that has been composted on an asphalt pad.

### Characteristics

- Gold to amber in color
- High moisture holding capacity
- Alkaline
- Carbon rich
- Absorbs ammonia and nitrogen
- Trace micro and macro nutrients
- Suppresses weed germination

### Columbia Mulch End Uses

- Animal bedding
- Landscape mulch
- Livestock feedlot nutrient management
- Soil conditioner

### Columbia Mulch

- Columbia Mulch is economical, sustainably sourced, does not contain pests, or weed seeds, and naturally biodegrades into the soil adding carbon and important trace nutrients.
- Columbia Mulch will not leach nutrients to ground or surface water and has a very uniform, consistent particle size (no fines and no clumps/sticks) making it easy to apply and spread.
- Excellent condition in horse arenas
- Excellent animal bedding

### Value Proposition

As a landscaping mulch, this product decreases the amount of irrigation needed for plants, suppresses weed germination and makes removing weeds easier while adding a uniquely colored mulch layer around plants. Less expensive than most other mulches and biodegradable in less time. As animal bedding, this product absorbs 3 times its weight in water, absorbs ammonia odors and can be composted. As a soil conditioner, it adds valuable carbon and important micronutrients while increasing soil moisture holding capacity and improving cation exchange.
